Golik Holdings Announces Interim Results 2026
Profit Attributable to Shareholders Amounted to approximately HK$71,572,000
Declaration of Interim Dividend of HK3.0 cents per Share

(Hong Kong, 26 August 2026) — **Golik Holdings Limited** (Stock code: 1118) and its subsidiaries ("Golik Group"/"the Group") is pleased to announce its interim results for the six months ended 30 June 2026. For the period, the Group's total revenue was approximately HK$1,577,365,000 (2025: approximately HK$1,818,056,000), representing a decrease of 13% as compared to the same period of last year. The decrease in revenue was primarily driven by the unsatisfactory performance of our building construction materials business in Hong Kong, specifically due to its lower delivery volumes of steel products compared to the same period of last year. After deduction of profit attributable to non-controlling interests, profit attributable to shareholders of the Company amounted to approximately HK$71,572,000 (2025: approximately HK$70,560,000), which remained largely stable compared to the same period of last year. Basic earnings per share was HK12.46 cents (2025: HK12.28 cents).

The Board of Directors has declared an interim dividend of HK3.0 cents per share.

Mr. Pang Tak Chung MH, Chairman of the Group, said, "During the period, global economic uncertainties persisted and the challenging macroeconomic environment showed no signs of improvement, as evidenced by the continued weak demand in markets including the Chinese Mainland and Hong Kong. Against this backdrop, all of our Group's business segments demonstrated operational resilience and continued to deliver a stable half-year performance that aligned with the Group's expectations."

Metal products line of business comprises mainly of steel wires and steel wire rope products manufactured in Tianjin, Heshan and Jiangmen in the Chinese Mainland. Revenue for the period was approximately HK$579,740,000 (2025: approximately HK$556,474,000), representing an increase of 4% as compared to the same period of last year. Profit before interest and taxation was approximately HK$61,166,000 (2025: approximately HK$68,394,000), representing a decrease of 11% over the same period last year.

The domestic real estate market has contracted for several consecutive years, leading to a continuous decline in demand for new elevator installations and posing significant challenges for the Group's elevator wire rope products. To navigate these market shifts, management implemented a number of revenue-enhancing and cost-saving measures during the period, which achieved certain positive outcomes. Specifically, the business benefited from further expansion in the repair and maintenance market and the export market, effectively offsetting the contraction in new elevator market. Consequently, sales volumes remained largely stable year-on-year, though gross profit margins came under further pressure.

Our high-performance lifting steel wire ropes business continued to record good performance in the period, with steady advancement in terms of product range, quality and application scope. Our products were widely used by major domestic and international companies in sectors including open-pit mining, construction machinery, deep-shaft mining and port hoisting. Our core competitiveness in high-performance lifting steel wire ropes business lies in our strong capabilities in product research and development and our advanced manufacturing techniques. During the period, the Group continued to invest resources in strengthening its research and development of high-performance lifting steel wire rope products and upgrading its equipment. Moving forward, the Group holds high expectations for the future development of the high-performance lifting steel wire ropes business.

Building construction materials line of business comprises mainly of processing and distribution of construction steel products, ready-mixed concrete and precast concrete products in Hong Kong. Revenue for the period was approximately HK$969,921,000 (2025: approximately HK$1,248,094,000), representing a decrease of 22% as compared to the same period of last year. Profit before interest and taxation amounted to approximately HK$73,430,000 (2025: approximately HK$71,326,000), representing an increase of 3% as compared to the same period of last year.

Competition within the Hong Kong construction materials industry remains intense, and this highly competitive environment is expected to persist for an extended period. During the period, the Group adjusted its market strategy by progressively lowering the proportion of high-risk and unprofitable businesses, while expanding its scale in value-added processing and high-quality product varieties. By providing premium, professional services to our clients, the Group aims to enhance its overall competitiveness.

In the medium to long term, the implementation of the “Northern Metropolis” plan is expected to generate numerous projects, including infrastructure, public housing and ancillary facilities, bringing positive growth opportunities to Hong Kong’s building construction materials industry. Coupled with the stabilisation of Hong Kong’s real estate market, private developers are anticipated to resume their development projects. Consequently, the Group remains optimistic about the medium- to long-term prospects of its Hong Kong construction materials business.

Medical imaging business specialises in providing diagnostic medical imaging services in Hong Kong including computed tomography (CT) scanning, magnetic resonance imaging (MRI), and positron emission tomography-computed tomography (PET-CT) scanning, among others. Revenue for the period was approximately HK$30,039,000, an increase of 97% as compared to the same period of last year. The significant growth in revenue was primarily attributable to the continued expansion of collaborations with insurance companies, specialist clinics and medical service institutions, through which the Group has established a more extensive referral network and driven sustained growth in the overall scale of imaging services.

AMI adopts a partner-centric business model, under which AMI establishes strategic partnerships with insurance companies, endoscopy centres and specialist clinics. Such business model has been proven to provide resilience and great scalability. In the second half of the year, management will continue to expand collaborations with insurance companies and major medical service institutions in Hong Kong to further increase referral cases, enhance the utilisation rates of our equipment and boost sustainable profitability and long-term business development.

Mr. Pang Tak Chung MH concluded, “While current market challenges are unlikely to disappear in the short term and intense competition persists across all business segments, we will continue to navigate these headwinds prudently. By adapting our business strategies to stay synchronized with the hyper-competitive environment and maintaining strategic focus, we will steadily progress toward our sustainable development goals. With a market position built over nearly fifty years and an experienced management team, the Group is confident in its ability to overcome the current adversity and continue creating long-term value for shareholders.”
